

Standard 6 *Reflection on Mitosis Poster - Angela Jurgensen*

My evidence of knowledge in Science and Biology is my poster about Mitosis and Meiosis, which I have completed to help me explain the cell reproduction cycle to 9th grade students.

While I have not completed a BSc, I have enough credits on advanced Biology classes to feel very secure in all Science aspects. I was halfway through my dentistry degree when I moved to the United States to pursue an arts degree, and so I have studied the human body, its physiology, anatomy and evolution in great detail. My favourite Science subjects are Biology and Physics, but I have been teaching Chemistry to 9th graders during my practicum and that has been very rewarding.

This evidence is important not so much because it shows depth of knowledge, but it is evidence of how I can get the knowledge and make it visually appealing and accessible for different types of learners.

*How are you currently encouraging the integration of different subjects
to better serve the students?*
